

Humidifier_VO_NoSub

A silver and translucent Dyson Humidifier appears on a black background.

MALE ANNOUNCER: Dyson Humidifier is hygienic. It kills bacteria before releasing any mist.

The shot zooms in, revealing a glowing blue interior of the Dyson Humidifier.

ANNOUNCER: Using Ultraviolet Cleanse technology, it exposes every drop of water to a UVC light.

A close-up reveals water flowing through a container above a glowing ultraviolet light.

ANNOUNCER: The water runs along the length of the bulb to ensure that 99.9% of bacteria in the water is killed.

A close-up of the water reveals animated bits of green bacteria flowing through. The bacteria slows, then turns silver.

Water gently flows out beside the glowing ultraviolet light into the piezo as the water bubbles nearby and steam rises around it.

ANNOUNCER: The piezo vibrates gently at first to mix the water in the chamber.

The water glows and flows up through the humidifier's Air Multiplier loop. The humidifier turns to reveal the interior of the Air Multiplier loop as mist is released out of the side of the loop.

ANNOUNCER: After the bacteria is killed, it increases the vibrations to create a fine ultrasonic mist, which is then drawn up into the Air Multiplier loop, where it is projected quickly, quietly, and evenly throughout the room.

A close-up reveals animated bubbles representing the mist as it flows through the air.

The shot zooms out to reveal the Dyson Humidifier releasing mist across a black background.

Two Dyson Humidifiers sit side by side in front of a white backdrop. Small black and blue text appears beside them.
